Curriculum Impact:

The day consisted of two parts: visiting the National Maritime Museum and sketching the London Landscape from the Royal Observatory.

At the National Maritime Museum, the children were able to delve deeper into the history of geographical regions across the globe. They learnt about the lucrative tea industry in China, studied famous artwork from the 17th and 18th Century, and discussed whether polar regions could help us live a more sustainable life.

Both classes had to climb to the top Greenwich park in order to access the breath-taking views of London. Here, they used their skills learnt during art lessons to sketch parts of the landscape. We discussed

Pupil Views

"I enjoyed looking at the clothing worn in the polar regions. There were some shoes made out of seal skin!"

"I liked walking to the top of the hill because there was such an amazing view of London!"

"I like exploring the continents using the Great Map at the National Maritime Museum"
